Project	<i>Stretton Road, Croydon – Japanese Knotweed Remediation</i>
Developer	<i>Mansell Construction</i>
PBA’s Role	PBA Solutions worked with Mansell to provide a Japanese knotweed solution that would enable a social housing scheme to be implemented once remediation was complete. Works involved the excavation of contaminated Japanese knotweed and removal to approved landfill site. The installation of a specialist Bioroot-barrier provides robust protection against Japanese knotweed while allowing moisture to pass through the barrier. Using this high-performance root barrier, which has a micro-perforated copper layer, has minimised the cost of Japanese knotweed remediation.
Value	Circa £15,000
Date Completed	Summer 2012

Japanese Knotweed Removal and Treatment - Mortgage Compliance - Insurance Backed Guarantees - Root Barrier Sales and Installation
